

MATTHEW SEXTON

IT SUPPORT • SYSTEMS ADMINISTRATION • CYBERSECURITY

989-545-0428 | msexton@notxes.com | notxes.com | Vassar, Michigan

PROFESSIONAL SUMMARY

IT and cybersecurity professional with a B.S. in Cyber Defense and hands-on experience supporting a county government environment. Experienced in end-user support, Windows administration, Active Directory, Group Policy, endpoint deployment, network troubleshooting, asset management, enterprise applications, and security-focused infrastructure. Maintains a multi-segment homelab for SOC monitoring, penetration testing, virtualization, Windows domain services, firewalls, and network engineering.

CORE TECHNICAL SKILLS

Systems & Administration: Active Directory, Group Policy, Windows Server, Windows 10/11, Linux, WSUS, MDT, imaging and deployment

Networking: TCP/IP, DNS, DHCP, VLANs, VPNs, Cisco switching, network troubleshooting, OPNsense, WireGuard

Security: Security Onion, incident response, firewall management, vulnerability assessment, endpoint security, Nmap, Wireshark, Metasploit

Virtualization & Infrastructure: Proxmox, VMware, VirtualBox, segmented lab networks, Windows domain environments

Enterprise & Support Tools: Snipe-IT, Google Admin, Mitel, OnBase, PaperCut, Barracuda VPN, IBM i, QuickBooks, remote support tools

PROFESSIONAL EXPERIENCE

Tuscola County — Help Desk Technician

Aug 2025 – Present

- Provide technical support and systems administration across a county government environment, supporting multiple departments, users, workstations, servers, printers, scanners, and specialized government applications.
- Administer and troubleshoot Active Directory, Group Policy, DNS, DHCP, WSUS, MDT, and Windows Server, including account/computer management, mapped drives, policy deployment, workstation imaging, and domain integration.
- Deploy and configure Windows 11 workstations using MDT, including drivers, domain joins, software deployment, BIOS/TPM/Secure Boot configuration, hardware migrations, and post-deployment validation.
- Troubleshoot network connectivity, VLANs, DHCP, DNS, VPN access, switch ports, and endpoint communication across county infrastructure.
- Support enterprise platforms including Mitel telecommunications, Google Workspace/Admin, OnBase, PaperCut, Barracuda VPN, QuickBooks, IBM i, and document imaging/scanning systems.
- Administer IT asset inventory in Snipe-IT, maintaining hardware records, user assignments, deployment status, and lifecycle tracking for county technology assets.
- Resolve complex endpoint, peripheral, application, and network-connected device issues while maintaining documentation and assisting with patching, endpoint security, access control, and secure system configuration.

CYBERSECURITY LAB & INFRASTRUCTURE PROJECTS

Enterprise Homelab / SOC & Red Team Environment

Designed and operate a segmented multi-system homelab using Proxmox, OPNsense, Cisco switching, Windows Server, Linux, and dedicated security tooling. Built separate management, red-team, victim, blue-team/SOC, and IoT networks with VLAN-based segmentation and firewall controls.

Security Operations & Detection Lab

Deployed Security Onion components and supporting analyst systems for network monitoring, log analysis, alert investigation, and defensive security practice. Integrated Windows and Linux systems to simulate enterprise endpoints and attack/defense workflows.

Active Directory & Infrastructure Lab

Built and administer a Windows domain environment with Active Directory, DNS, domain-joined Windows/Linux clients, policy testing, network services, and segmented infrastructure used for administration and cybersecurity exercises.

Penetration Testing & Network Security

Conduct reconnaissance, vulnerability scanning, exploitation, privilege-escalation practice, packet analysis, and network enumeration using Kali Linux, Nmap, Wireshark, Metasploit, and intentionally vulnerable systems.

Self-Hosted Services & Monitoring

Deploy and maintain infrastructure services including Pi-hole, Portainer, Uptime Kuma, Netdata, Passbolt, Nginx Proxy Manager, and VPN/remote-access services across Raspberry Pi and virtualized hosts.

Full-Stack D&D Management Application

Developing a full-stack web application using Next.js, Supabase, and PostgreSQL to manage campaign data and workflows, demonstrating database design, backend integration, and modern web application development.

EDUCATION

Davenport University — *Bachelor of Science in Cyber Defense*

2026

- GPA: 3.87, High Honors; Health Care Information Assurance Specialty; Information Assurance Specialty.
- Relevant study: Cryptography, Information Security & Assurance, Incident Response, Network Intrusion, Health Care Organizations & Systems.

MILITARY LEADERSHIP

United States Marine Corps — *Corporal / Team Leader, Infantry*

2013 – 2017

- Led and mentored personnel in high-pressure operational environments while coordinating mission-critical tasks requiring accountability, communication, discipline, and precise execution.
- Developed leadership, risk management, training, teamwork, and decision-making skills transferable to technical operations and incident-response environments.

ADDITIONAL STRENGTHS

Government IT • Technical Troubleshooting • Documentation • User Support • Cross-Department Communication • Asset Lifecycle Management • Security-Minded Administration • Independent Lab Research
